### DETAILED ACTION

1. Applicant's election of Group I, drawn a composition, claims 1-22, are acknowledged.

Examiner will examine claims 44-53. Claims 23-43, drawn to a method, are withdrawn from consideration at this time.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-18, 23, 44-46 and 51-53 rejected under 35 U.S.C. 102(e) as being anticipated by McCormick et al., U.S. Patent Number 6,611,096.

McCormick discloses organic electronic having a conducting self-doped polymer buffer layer, particularly a self-doped polyaniline buffer layer (see column 2, line 65-column 3, line 10).

Column 5, line 50-column 6, line 68 describes the self-doped polyanilines with sulfonic acid groups wherein the polyaniline has a form of

It is disclosed in column 7, lines 14-21 that although sulfonic acid groups are used but other suitable groups can include perfluoroacids, carboxylic acid, phosphoric acid and phosphonic acid.

4. Claims 1-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Gardner et al., U.S. Patent Number 5,716,550.

Gardner discloses electrically conductive elements that can be prepared by applying electrically conductive coating compositions. Additionally, the reference discloses a composition comprising an aqueous dispersion of polyaniline and colloid-forming polymeric acid (see column 11, lines 25-30, column 12, lines 38-44 and column 13, lines 39-52). Column 12, lines 1-20 disclose the claimed polyaniline. It is disclosed in column 10, line 22 a fluorinated polymeric sulfonic acid. Examples 26-29 disclose the use of metal particle additives in the composition.

#### ***Double Patenting***

5. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and

Art Unit: 1774

useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

6. Claims 1-22 and 44-53 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-10 and 20-21 of copending Application No. 10/803,113. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented. Both applications recite a composition comprising an aqueous dispersxion of a polyaniline and at least one colloid-forming polymeric acid.
